The process is favored at low pH and is greatly influenced by the NaCl concentration. Other Methods The Carbon-in-Pulp process is a process that can be used for the recovery of heavy metals from MSWI fly ash. then granular activated carbon is utilized as an adsorbent for metal adsorption.

If the two adsorption processes occur in a cooperative way, physical adsorption is an important component of the overall chemisorption process - z The point where curves 1 and 2 intersect becomes the activation energy for chemisorption.

Chapter 9 Adsorption

Waste incineration is one of many societal applications of combustion. As illustrated in Figure 3-1, the typical waste-incineration facility includes the following operations: Waste storage and feed preparation. Combustion in a furnace, producing hot gases and a bottom ash residue for disposal.

A two-bed pressure swing adsorption (PSA) process using activated carbon was studied to recover hydrogen from the effluent gas (H₂/CO/CO₂, 39.3:35.4:25.3 vol.%) of a melting incineration process. The adsorption dynamics of the activated carbon bed were investigated by breakthrough experiments.
