contingency table. Although loglinear models can be used to analyze the relationship between two categorical variables (two-way contingency tables), they are more commonly used to evaluate multiway contingency tables that involve three or more variables. The variables investigated by log linear models are all treated as "response variables".

Advanced Log-Linear Models Using SAS Daniel Zelterman

Daniel Zelterman applies his extensive SAS knowledge and biostatistics experience to illustrate how to use the GENMOD procedure to analyze log-linear models for categorical data. The discussion of each model and method emphasizes statistical aspects, such as interpretation of results, rather than programming skills.
