advances in powder metallurgy pdf

Advances in powder metallurgy is a standard reference for structural engineers and component manufacturers in the metal forming industry, professionals working in industries that use PM components and academics with a research interest in the field.

Proceedings of the 2017 International Conference on Powder Metallurgy & Particulate Materials, June 13-16, Las Vegas, Nevada. Contains 94 technical papers encompassing over 1000 pages in a fully searchable PDF in a format that preserves the original color in all figures.

Advances in Powder Metallurgy & Particulate Materials 2017

Powder metallurgy (PM) is a familiar metal forming technology used to produce dense and precision components. Different powder and component forming routes can be used for the creation of an end product with specific properties for a particular application or industry.

laser forming (DLF) technique is another advanced powder processing technique. Recently, much effort has been made to apply this process to automobile, aerospace and medical fields due to the potential of producing complex shaped Ti alloy structures. In this paper, the above two techniques are introduced as recent powder metallurgy techniques.
