Chemistry 102 1 Introduction Qualitative analysis is a method used for identification of ions or compounds in a sample. In many cases, qualitative analysis will also involve the separation of ions or compounds in a mixture. Examples of qualitative tests would include ion precipitation reactions (solubility tests) or chemical reactivity tests.

Experiment Qualitative Analysis 1

Chemical analysis can be either qualitative or quantitative in nature. In qualitative analysis we want to know which elements or characteristic chemical species are present. In quantitative analysis we are interested in the relative amounts of the components present. We will be concerned with qualitative analysis in this laboratory.

systematic analysis. Finally, a simplified course of qualitative analysis is given; this chapter will be particularly useful where the time allocated to qualitative analysis is limited. This book will continue to be of immense value to A-level and undergraduate students of chemistry and their teachers, as well as practising analysts.
