Analytical Ultracentrifugation Analytical ultracentrifugation (AUC) is a key tool to assess sample homogeneity, determine the protein association state and the detergent concentration, and characterize the protein's "protein equilibrium and the particle composition.

Analytical Ultracentrifugation - an overview

Part of the Progress in Colloid and Polymer Science book series (PROGCOLLOID, volume 127) Abstract Analysis of data from the analytical ultracentrifuge used in sedimentation equilibrium modes calls for knowledge of the absolute (as distinct from relative) final solute mass distribution as a function of radial distance.

Determination of the absolute fringe number in Rayleigh

Analytical ultracentrifugation (AU) is re-emerging as a versatile tool for the study of proteins. Monitoring the sedimentation of macromolecules in the centrifugal field allows their hydrodynamic and thermodynamic characterization in solution, without any interaction with any matrix or surface.
